**SCIENCE WITHOUT RELIGION IS LAME,
RELIGION WITHOUT SCIENCE IS BLIND!**

Albert Einstein—Science, Philosophy and Religion, 1941

Lucerne, Switzerland, March 1st, 2015

Ladies and gentlemen,
Valued friends of our world organisation!

Today, we invite you to renew your not only very welcome but also greatly appreciated and, even more, hoped for membership with **The World Foundation for Natural Science** for the duration of another twelve months. Twelve months is not a long time, necessarily, if you look at the history of our Earth, which was brought forth billions of years ago. To this day, science has no precise explanation—that really makes sense and considers all the elements of Creation—for how the Earth was actually “formed.” The fact is that we are living upon her and she is our temporary home.

We of **The World Foundation for Natural Science** concern ourselves less with topics such as our solar system, in which the Earth is only one of eight Planets moving around the Sun, or whether or not our solar system had really formed already 4.6 billion years ago. We leave these discussions to astronomers, astrophysicists and other scientists who love to rack their brains in endless discussions, and who converse and argue about who is actually right. Concerning these matters, we simply wonder at the magic of Creation and we are grateful for being a part of it. Our whole attention is on restoring the balance on our precious Planet. You can surely say that it is our classroom or our home, while we live here. What began billions of years ago and was brought forth and precipitated with loving power has become completely unbalanced, especially in the last hundred years, the age of modern technology and modern inventions. As a result, our finely balanced ecosystem and all the harmony of Creation has now come to the brink of destruction.

As an informed and intelligent person, you will certainly have realised that you, personally, have it in your hands to actively do something about this yourself and make a positive change, so that the place we were born will become more liveable, once more. It is never too late to bring about something positive, if those who have recognised this also actually undertake something. But how, and above all, what can you contribute and do? On the one hand, by joining with us, we **together** can pull the strings through education; on the other hand, you can involve people such as yourself with what we know and which is necessary for survival. They, in turn, will then pass on to their friends and their children what they have recognised, and so on. In today’s vernacular this is simply called the “snowball effect.” Thank God many people have realised that our Planet Earth does not float in harmony anymore, for the simple reason that slowly but surely it is starting to affect each Earth-dweller directly, and influencing negatively each individual life. Many humans and animals fall ill and die of unknown causes or seemingly without reason. More and more babies are born already ill, and science has no answers. Just giving up here, and saying “There is nothing we can do about it!” would be defeatist and fatalistic. This attitude towards life would indeed lead to the downfall of humanity and, in the end, of the Earth, too.

The World Foundation for Natural Science takes the restoration and healing of our Earth seriously, by bringing our surroundings and ourselves back into harmony, step by step, with responsibility and commitment in accord with Natural and Divine Laws – the true Laws of Nature. We have great hope that you see the importance of accepting our invitation to recognise and renew your membership, and that, therefore, you will say “YES” without hesitation. These are but three letters in our twenty-six-letter alphabet, but the influence of these three letters not only has enormous impact on your own life, but is immeasurable for your direct and indirect surroundings as well. You might say that this is a rather presumptuous statement, but we assure you here, that it is not so at all. It is our hope that, at the same time, you realise how important and indispensable to life in the truest sense such a promise is.

No person in this world can manage all tasks or even his own life all by himself. Time and again we all depend on having friends, partners, like-minded people, colleagues, and organisations such as ours for example, around us, on which we can count for support and help. Your help and assistance in our enormous task of restoring and healing our Earth is not only desirable but, considering the manifold duties for reaching our goal, even a must coming from within, or so we hope.

You have already given us your valuable support in the past years, and for this we sincerely thank you. We thank you for your loyalty and your constancy, for without all this we could not look back on twenty-two successful years. We have concluded an intensive year with a Congress that exceeded all expectations. At the 2014 Annual Congress with the main theme, “**Natural Agriculture and the Basics for a Healthy Lifestyle**” we have created a basis on which we can again tie in with in 2015, the UN International Year of the Soils. Not only do we want to encourage farmers to practice an especially harmonious, natural and sustainable agriculture, but we also want to draw consumers’ attention to the necessity of a relationship of man with the soil. Healthy agriculture is the foundation for a healthy humanity.

In the last two to three hundred years, mechanisation has caused great distress for us and our precious Planet Earth, unfortunately. Reversion is absolutely essential as soon as possible. Our worldwide organisation **The World Foundation for Natural Science** is a driving force in educating people of every age, profession and interest. Our care and love for Planet Earth and her inhabitants forces us to do more than ever. Yet, because we cannot manage this alone, it needs like-minded people such as you, who are willing to commit themselves to the Earth together with us, and with an open mind and an open heart. As we are so much a part of Nature, it is our responsibility to restore a harmonious relationship with Nature.

We need your active support when and wherever possible in the form of educating or distributing written information in your location and in the form of financial assistance, also for the other matters we are especially committed to:

- ☉ We teach people about the unnatural, technical radiation, caused by mobile communications, microwave ovens, cordless phones, Wi-Fi, tablets, mobile phones/Smartphones or similar devices and the destructive effects it all has on us human beings and on Nature.
- ☉ We educate parents, teachers and especially children and teenagers about the risks of the Internet and social media, and also inform them how these new media can be used sensibly and responsibly.

- ☉ We offer solutions for how smokers can quit. Smoking and also 'passive smoking' only damages health, unnecessarily straining the purse, too. We work on expanding the ban on tobacco advertising of the European Union—which was enacted in July 1998 with our support—to other countries, and especially on raising the age limit for smoking to eighteen.
- ☉ We engage in protecting the oceans and their inhabitants from over-fishing and pollution and support the development of worldwide marine reserves.
- ☉ We inform about the effects of genetically modified organisms (GMO) on the health of animals and humans. The consequences are potentially catastrophic, ranging from allergies to cancer, and ultimately leading to the annihilation of mankind.
- ☉ We encourage you to plant trees, because it is the simplest, least expensive and most effective way to do something against global warming and to reforest the woods.
- ☉ We advocate for the health of humans, animals and plants. Ask yourself: How can man be healthy, when the Planet is ill? The answer is obvious, and in order to put the solutions into effect we need your active support.
- ☉ We have answers to many questions of life, which until now neither the church nor the state can answer satisfactorily.

Our children and our children's children do not want to know what we have said but what we have done to leave them a healthy and liveable Planet. The more people team up and support these efforts, the more we will effect, together. Therefore, we cordially invite you once more to fill in the enclosed Commitment form for this promising year of 2015 and to renew your membership with **The World Foundation for Natural Science**.

As a novelty, as a sponsor you have *free admittance to all lectures* run by our organisation in this year of 2015, and as a benefactor *to all our events in 2015 including this year's Scientific Congress*, which will take place again in Ulm, Germany, from Thursday, October 29th, to Sunday, November 1st, 2015. As a sponsor or benefactor, especially, you help us to be able to finance events and activities. With us, it is not about the money. It is not our job to accumulate money in a bank account in order to finance our existence or even pay great wages to our staff. On the contrary: All our staff members actually receive only a pro-forma compensation of the smallest amount, and our other voluntary helpers also are giving their all for what they have recognised as being essential to life. Your membership contribution and your additional donations, which we gratefully accept and upon which we depend in order to cover all arising expenses, are used **exclusively** for the fulfilment of our mandate—and always sensibly!

Saturday, February 14th, 2015, we presented our updated website www.naturalscience.org to the public. You also have the possibility to directly fill in your membership form there and maybe you might even pass the enclosed membership form in this letter on to a friend. We have great hope that you will visit us on our website often and, by word of mouth, will pass on the good news to your acquaintances and friends as well. Even though we have by no means yet been able to put all our scientific articles and documents of the last twenty-two years on our website for you, you will find many interesting reports and information there today.

Please make free use of the articles and the knowledge offered liberally, and present your friends with the address of our website and perhaps even with a membership. We can all learn from each other, and the more we share our knowledge, our connections and our passion for our lives, the sooner we may achieve great things, **together**. You will have no regrets, and your children and children's children will be proud that their ancestors, grandparents and even their parents, were already so forward-looking and had not only lived and acted in the present but also with concern for the future.

We assure you that we do not take your membership in our organisation, and accordingly a fertile partnership, for granted. But we appeal to your intelligence and your common sense to not only keep up your relationship with us, but preferably even expand it through a long-lasting and active collaboration.

If you should have any questions, we are happy to be there for you, by phone or e-mail. From our hearts, we wish you good health, all the best and God's rich blessings on all your ways in our abundant lives. Now I hold the hope to be able to welcome you at one of our events. Until then I remain always and everywhere in service to Nature and to you as a fellow inhabitant of our living environment, your....

The Very Rev. Dean Paul Probst, SF, em
European President

The World Foundation for Natural Science

Enclosed: Membership/Commitment form for 2015 and membership card for personal data
