## ***WHO officials manipulate information about HPV vaccines***

**Recommended vaccinations by official institutions are rarely based on scientific evidence. How rarely this is the case becomes evident in the context of the very controversial vaccination with the human Papillomavirus HPV. Alarming facts concerning the safety of the vaccination against HPV have been held back by WHO officials and government officials of various governments when advising the commission of experts of the Japanese government.**

The provided vaccinations are designed to protect against cervical cancer, HPV (human Papillomaviruses). However, the list of side effects – some of them very severe – is long. They range from blackouts, massive neurological and immunological effects to organ failure of young girls' ovaries.

Reports about the above-mentioned side effects, numerous cases of permanent disabilities and even actual deaths, occurring in correlation to the PHV vaccinations are being published all over the world.

Nevertheless the WHO obviously tries, together with state agencies, to keep up the illusion of a safe HPV vaccination.

Driven by this, Dr. Sin Han Lee, director of the Milford Molecular Diagnostics Laboratory in Connecticut, USA, has written an open letter to the Director General of the WHO (World Health Organisation), Dr. Margaret Chan. This letter of complaint has been sent to Dr. Chan as well as members of the GACVS (Global Expert Board of Vaccination Safety), to the CDC (Centers for Disease Control and Prevention), to the Japanese Ministry of Health, Labour and Welfare and other agencies. In this letter, Dr. Sin Hang Lee reports about the

manipulation and suppression of scientific data in order to keep up the illusion of a safe HPV vaccination – despite adverse facts.

Dr. Lee refers to e-mails that have recently been added as evidence during the so-called “Freedom of Information” procedure in New Zealand uncovering the fact that Dr Robert Pless, GAVCS President, Dr Nabaye Koji, Representative of the Public Health Ministry of Japan, Dr. Melinda Wharton of the CDC, Dr. Helen Petousis-Harris of the University of Auckland, New Zealand and others, (among them officials of the WHO) had been actively involved in misleading the expert board of Japan before, during and after February 26<sup>th</sup>, 2014 in a public hearing, held in Tokyo.

This letter of complaint clearly shows that the WHO group of officials and civil servants who were meant to advise the expert commission of the Japanese government in regard to the HPV vaccination had already been informed by a specialist in their own ranks – ahead of the official Tokyo hearing on February 26<sup>th</sup>, 2014 – that the HPV vaccination, in comparison to other vaccinations, increases the level of cytokines (proteins with regulatory functions affecting growth and differentiation) including the necrosis tumor factor (TNF), especially at puncture site. However, those responsible preferred to withhold from the public this important piece of information at the hearing.

This piece of scientific information, known to all members of the advisory group, is also missing in the statement of the GACVS on the safety of the HPV vaccination published on March 12<sup>th</sup>, 2014. This is precisely the GACVS-statement that was used to suggest to public health authorities, political decision-makers and doctors all over the world that there is no need to worry (at all) regarding the safety of the HPV vaccination.

Dr Lee closes his letter of complaint by saying plainly that serious adverse reactions occur more frequently with the HPV vaccinations than with other vaccinations and that individuals with certain dispositions can die suddenly and inexplicably.

It seems that these ‘experts’ “considered it necessary to suppress this information”.

Dr Lee:

“Those whose names appear in my complaint and any who blindly dismiss valid safety concerns in order to promoting HPV vaccinations should be held accountable for their actions. There is no excuse for intentionally ignoring scientific evidence. There is no excuse for misleading global vaccination policy at the expense of public health interests. There is no excuse for such a blatant violation of the public trust.”
