OPENING OF OUR CONGRESS!

THE BURDEN OF LONELINESS—WHY TOGETHERNESS AND CARING FOR EACH OTHER IS ESSENTIAL FOR US

For people, relationships, partnership, family, friendships, bonding, compassion and communication are of such immense importance that we react strongly to a lack or even absence of them. The "symptoms" range from a cold to high blood pressure, heart attack, stroke, cancer, mental illness and death. What can we do about loneliness that more and more people are suffering from?

The Very Reverend Dean em. Paul PROBST, SF,
European President, *The World Foundation for Natural Science*, Lucerne, Switzerland

Friday, November 1st, 2019 from 9:00 am to 6:00 pm

5G—TOTALLY DIGITAL? WHY 5G IS MUCH MORE THAN SIMPLY A NEW STANDARD FOR MOBILE COMMUNICATION

The wireless telephone at work, the smartphone in your pocket, WLAN and smart meter at home—and now the new 5G mobile communications standard all mean that exposure to electromagnetic radiation is constantly increasing. But how harmful is the radiation really? Do the international limits offer sufficient protection? Who wants 5G? And what is new about it? Franz Ulrich explains the downside of mobile phone communication without scaremongering and points out concrete options for action in everyday life.

Franz ULRICH, Electrical Engineer ETH, Hohenrain, Switzerland

IS MOBILE COMMUNICATION UNHEALTHY? THE VISIBLE EFFECTS OF ELECTROMAGNETIC RADIATION

How does our body deal with mobile phone radiation? Is it possible to easily recognise the effect of technical radiation on natural systems? Does radiation change water, the element on which all life is based? How do animals and plants react? Denise Ulrich pursued this question with experiments in her own laboratory. Her findings provide clear answers and show that the solution is simple.

Denise ULRICH, MSc in Geography, Hohenrain, Switzerland

"A ROLLING STONE GATHERS NO MOSS"— A PRACTICAL GUIDE FOR MORE EXERCISE IN EVERYDAY LIFE

If there is a lack of movement, something comes to a standstill. This applies not only to the physical level, but also to our thoughts and feelings. Gabriela Baumann talks about the "tree of life" in the human being, and how breathing and posture affect our feelings and general health. Those who do not practice regularly certain activities lose the ability to do so. Your body speaks to you—a guide to listening.

BEEKEEPING REVOLUTION—SPECIES PROTECTION FOR HONEYBEES

The housings of honey bees in their present form were designed by humans to be able to manipulate the bees as easily as possible. We have moved further and further away from nature, with massive negative effects on bee health. Now we have to focus on the natural behaviour and needs of honeybees and offer them nature-oriented habitats again. Ultimately it is about the conservation of the species.

**FREED FROM POISON—THIS IS HOW WE HELP OUR BODY
TO SAFELY GET RID OF TOXINS**

We live in a much polluted world. Studies and experience show that the body's own metabolic toxins and waste products as well as toxins absorbed from the environment can cause damage to the body. This is why the detoxification of our body, its organs and tissues is more important than ever today. The liver and the intestines play an especially central role. How do we support these excretory organs so that toxins can be eliminated in a targeted and safe way?

GOODBYE PLASTIC!—A LIFE WITHOUT PLASTIC IS POSSIBLE

No other place in Europe produces more plastic than Germany. But it is not so difficult to escape the packaging madness. Find out how plastic affects the environment and our health and what you can do to stop the flood of plastic. Because "nobody has to buy plastic, you just have to know the alternatives – and that is not as complicated as many think."

Anneliese BUNK, "Der Spiegel" Bestselling Author, Munich, Germany

Sunday, November 3th, 2019 from 9:30 am to 1:00 pm

**BUILDING WITH WOOD—WITHOUT COMPROMISE, HEALTHY,
INDEPENDENT AND IN CIRCULATION**

From the promise to build houses that make us healthy, a model has emerged in the last 25 years which changes the construction industry with explosive power. The lecture shows possibilities that open up to us when we build using the gifts of nature and dispense with chemicals. Real wooden houses do not consume energy and are the healthiest for us and the environment. We can look ahead with joy because there is no future but only the potential of the present.

Florian THOMA, graduate engineer, St. Johann im Pongau, Austria
